Scope of Work:

Upgradation, Renewal and support for Symantec Antivirus (Symantec Endpoint protection 14.3 version) – Server & 124 licenses, for one year. The support includes backup, restore (if required) and addressing virus issues on client machines.

Symantec Endpoint Protection Server Upgrade

The scope includes upgrading Symantec Endpoint Protection (SEP) to the latest release update (SEP 14.3 RU9) on the existing server, followed by configuring the system for managing both Windows 7 clients (with 14.3 RU1) and Windows 10/11 clients (with 14.3 RU9) through client grouping and version management policies.

Detailed Scope of Work

1. Upgrade from Symantec Endpoint Protection 14.3 RU1 to 14.3 RU9

- i) Preparation Phase Inventory & Backup:** Analyze the current environment (version, policies) and take backups of the SEP Policies. Confirm compatibility of the current Symantec version with the new Windows OS. Identify and document all SEP policies and configurations to ensure post-upgrade consistency.
- ii)** Create a complete backup of the Symantec database and necessary server files (certificates, logs, etc.). - Verify the integrity of the backup to ensure it can be restored after the upgrade. - Document the backup process and location.
- iii) Review System Requirements:** Ensure the hardware and software meet the updated version's requirements.
- iv) Notify Stakeholders:** Inform users about potential downtime or interruptions during the upgrade.
- v) Upgrade SEP Manager:** Install the 14.3 RU9 update on the management server. Ensure all necessary server components (e.g., IIS, SQL, etc.) are correctly configured for SEPM. Verify database connectivity and complete the manager upgrade.
- vi)** Restore the policies and procedures - - Restore the previously backed-up Symantec data (policies, client information, logs, etc.). - Test the restoration to ensure all data has been successfully restored and SEP functions properly on the updated platform.

2. Group Clients Based on Operating Systems

Create and Place Windows 7 and Windows 10/11 clients into separate groups to manage them independently.

3. Configure Upgrade Policies for Windows 10/11 Clients.

4. Exclude Windows 7 Clients from Automatic Upgrades and keep updated for RU1.

Since Windows 7 clients should remain on 14.3 RU1, ensure that you exclude this group from the automatic upgrade to 14.3 RU9. Even though Windows 7 clients will remain on 14.3 RU1, it can still get the latest virus definitions and security policies by:

- Scheduling LiveUpdate sessions.

· Applying the latest content packages to these clients.

5. **Monitor and Report Client Status**

6. **Post-Upgrade Validation**

Validate Functionality: Confirm that policies, and reporting features are functioning as expected.

Test Client-Server Communication: Ensure that upgraded clients are reporting correctly to the SEP Manager.

Check Logs & Troubleshoot: Review logs to detect any upgrade-related errors and resolve them.

Verify Security Definitions: Ensure that virus definitions and signatures are updated and functioning.
